Optra360

Simplifying Complexity

Project No.: 499
Commencement Date: 11/08/2026

Update 7
Brand Expression Guidelines

Brand Identity Usage Guidelines

Primary Logo

The full wordmark is the preferred expression wherever space allows.

The primary Optra360 and Zoptro wordmarks should be used whenever the full construction can remain clear and recognisable. When sufficient space is available, always favour the complete approved wordmark.

OPTRA360

Use as the primary master-brand identifier across corporate, website, sales, marketing and other principal communications.

ZOPTRO

Use as the primary product-brand identifier wherever the communication is specifically product-led.

Digital Logo Identifiers

Purpose-built expressions for small and constrained digital environments.

When the full wordmark cannot maintain sufficient legibility, the identity uses approved digital adaptations designed specifically for their respective formats.

PROFILE MARK

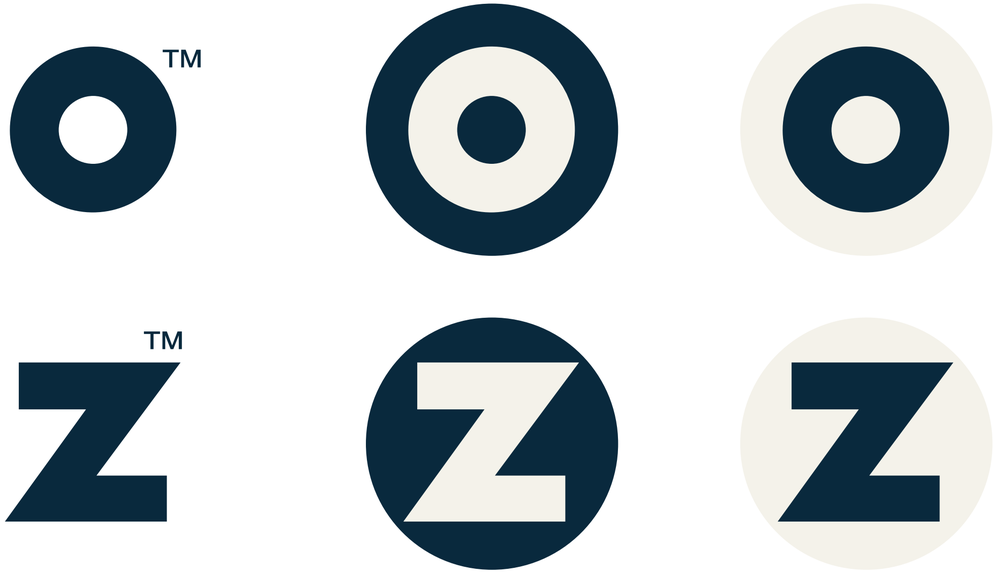
Used for social media profiles, avatars and other small-format brand placements where a compact visual identifier is required.

FAVICON

Used for browser tabs, bookmarks and other browser-level identifiers.

APP ICON

Used for mobile and desktop application environments where the brand needs to remain recognisable at small sizes.

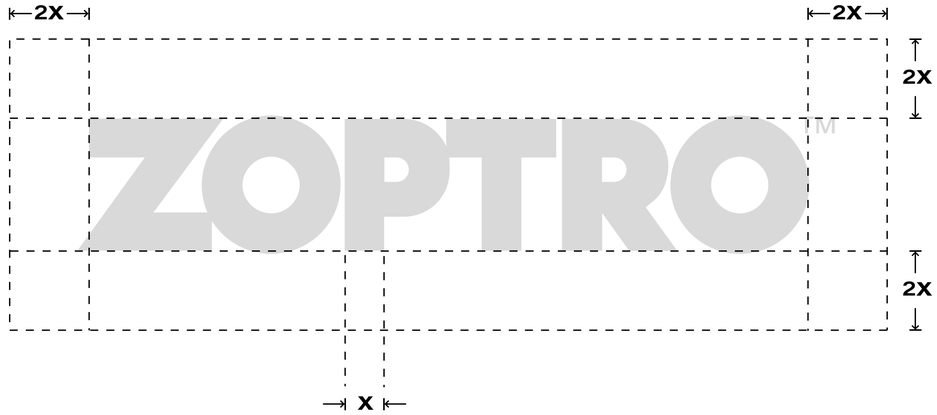


Use only the approved digital adaptations. Never crop, rearrange, redraw or reconstruct the master wordmark to create a small-format mark.

Logo Clear Space

Clear space preserves recognition and prevents surrounding elements from competing with the mark.

Maintain a defined protected area around every approved logo expression. No typography, imagery, iconography, graphic element or other brand mark should enter this area.



The clear-space unit (X) is defined by the width of the vertical stem of the letter “P” in the logo, as indicated below. All clear-space measurements are based on this unit and scale proportionally with the logo.

Minimum Size

The logo must remain clear, legible and recognisable at every approved scale.

Minimum size is measured by the total width of the approved logo artwork. These dimensions represent the recommended minimum size for maintaining legibility, recognition and visual integrity across applications.

Brand Typography

Typography system

Typography is a key part of the Optra360 expression system. The combination of Outfit and Figtree balances distinctive brand expression with everyday clarity.

Outfit

Expression · Impact · Distinction

Used for headlines, key statements, display typography and prominent brand communication.

Figtree

Clarity · Readability · Function

Used for body copy, supporting information, UI, documents and longer-form communication.

Outfit creates distinction. Figtree creates clarity.

Display Typeface

Outfit

Outfit is the primary display typeface for Optra360. Its geometric construction and confident forms create a distinctive, contemporary expression that supports the brand's focus on clarity, structure and progress.

Primary applications:

- Headlines
- Section headings
- Key statements
- Campaign headlines
- Large numbers and stats
- Call to action

Recommended weights:

Regular — secondary display use
Medium — subheads and emphasis
SemiBold — headings
Bold — primary headlines and key statements

Use Outfit where the brand needs to be noticed.

Supporting Typeface

Figtree

Figtree is the primary reading and functional typeface. Its clean, highly legible forms make it suitable for information-rich communication across digital, print and product environments.

Primary applications:

- Body copy
- Supporting text
- Descriptions
- Captions
- UI and product interfaces
- Tables and data

Recommended weights:

Regular — Body copy
Medium — Supporting emphasis
SemiBold — Labels and important information
Bold — Stronger emphasis where required

Use Figtree wherever information needs to be understood easily.

Typographic Hierarchy & Weight

Typographic hierarchy & weight

A clear hierarchy helps information feel structured, purposeful and easy to navigate. Typeface, size and weight should work together to establish importance without unnecessary visual emphasis.

Hierarchy should move from strong to subtle, allowing information, not decoration, to determine emphasis.

H1 / DISPLAY
Outfit — Bold
Primary headlines, key statements and major points.

H2 / HEADING
Outfit — SemiBold
Section headings and major content divisions.

H3 / SUBHEADING
Outfit — Medium
Supporting headings and secondary information.

BODY
Figtree — Regular
Primary reading and descriptive content.

BODY EMPHASIS
Figtree — SemiBold
Selective emphasis within body copy.

CAPTION / METADATA
Figtree — Regular / Medium
Supporting information and secondary details.

Text Alignment

Left alignment is the primary typographic alignment for Optra360/Zoptro

It reinforces the brand's principles of clarity, structure and practicality, while creating a consistent reading rhythm across digital, print and corporate communication.

PRIMARY — LEFT ALIGNED

Use for:

Headlines and subheadings
Body copy
Presentations and reports
Website and digital communication
Product and UI content
Information-rich layouts

SELECTIVE — CENTRE ALIGNED

Centre alignment may be used when the composition requires greater visual balance, particularly for:

Hero statements
Cover pages
Campaign headlines
Short, high-impact messages
Presentational moments

Avoid

Justified text, excessive centre alignment, or unnecessary changes in alignment within the same content block.
Left aligned by default. Centre aligned when the composition calls for balance.

Typography Do's & Don'ts

DO

Use Outfit for distinctive, high-impact communication.
Use Figtree for readability and information.
Maintain a consistent hierarchy.
Use weight to create emphasis.
Give headlines and body copy sufficient breathing room.
Maintain clear alignment and spacing.
Use the approved typefaces consistently across brand touchpoints.

DON'T

Introduce additional typefaces without approval.
Use Outfit and Figtree interchangeably without purpose.
Mix excessive weights within one composition.
Stretch, condense or distort the typefaces.
Use excessive letter spacing as a decorative device.
Create overly dense text blocks.
Use typography as decoration at the expense of readability.

Brand Design Language

Brand Design Language

The Optra360 and Zoptro design language is built around clarity, structure and purposeful simplicity.

The visual system avoids unnecessary decoration and relies on color, typography, spacing and geometry to create hierarchy and distinction.

Core characteristics:

CLEAN
Clear layouts with only the elements needed to communicate.

STRUCTURED
Consistent alignment, spacing and visual hierarchy.

GEOMETRIC
Sharp edges and defined forms reinforce the character of the identity.

PURPOSEFUL
Every visual element should have a functional or communicative role.

Shape & Geometry

The brand uses a precise, geometric construction language that reflects the forms established in the logo and identity.

Core characteristics:

90° EDGES

Use square corners and defined geometry across cards, containers, panels and graphic elements.

CONSISTENT PROPORTIONS

Maintain deliberate relationships between elements, rather than introducing arbitrary shapes.

NO BORDER RADIUS

Avoid rounded corners as a default styling device.

CLEAN FORMS

Use simple geometric shapes without unnecessary decorative treatment.

Sharp geometry reinforces the precision of the identity.

Containers, Cards & Sections

Cards and containers should create structure without adding visual clutter.

Design principles:

NO BORDERS BY DEFAULT

Sections should be distinguished through color, spacing and hierarchy, rather than outlines.

GENEROUS INTERNAL PADDING

Content should have sufficient breathing room within cards and containers.

CLEAR SEPARATION

Use background color changes, spacing or tonal contrast to establish distinct sections.

CONSISTENT GEOMETRY

Maintain the same square-cornered construction throughout the system.

Let structure come from the layout, not from lines.

Backgrounds & Surfaces

Backgrounds should provide a clean, calm foundation for content and brand communication.

Preferred:

Solid color backgrounds
Clarity Ivory and White for open layouts
Authority Blue for strong, high-contrast applications
Approved color variations for section differentiation
Clear contrast between background and content

Avoid:

Gradients
Complex textures
Decorative background effects
Excessive visual noise
Unapproved colors or effects

Keep the background quiet so the message can lead. The identity already has strong color and geometric character, the background does not need to compete with it.

Design Language Demonstration

Workforce performance overview

Review key performance indicators across teams and locations.

Track workforce performance, identify operational gaps and bring key insights together in one clear view. Use the data to understand what is working, where attention is needed and what action should follow.

Updated 09 September 2026

Key performance insights.

Track key indicators, identify emerging gaps and focus attention where it matters most.

Operational Clarity.

Connect people, processes and performance through a clearer operating view.

Turn information into action.

Bring the right information together, understand what needs attention, identify opportunities for improvement and take informed action with confidence.

Know More ›

Brand Color Combinations

Brand Color Combination 1

P1	P2	P3	P4

The core expression of the Optra360 identity.

Authority Blue, Clarity Ivory, Grounded Olive and Progress Orange come together to create the complete primary color language. Authority Blue provides structure and credibility, Clarity Ivory creates openness, Grounded Olive adds a human and practical dimension, while Progress Orange introduces energy and forward movement.

Usage principle:

Use Authority Blue and Clarity Ivory as the primary foundation, with Grounded Olive and Progress Orange introduced selectively to add character, emphasis and visual interest. Avoid giving all four colors equal visual weight.

Workforce performance overview

Review key performance indicators across teams and locations.

Track workforce performance, identify operational gaps and bring key insights together in one clear view. Use the data to understand what is working, where attention is needed and what action should follow.

Updated 09 September 2026

Brand Color Combination 2

P1	P2	S1	P4

A high-contrast expression with added visual depth.

Authority Blue and Clarity Ivory establish the core foundation, while S1 introduces a lighter blue layer that adds hierarchy and depth. Progress Orange provides a focused accent for moments that require attention or action.

Usage principle:

Use Authority Blue as the dominant foundation, with Clarity Ivory and S1 creating contrast and hierarchy. Use Progress Orange selectively for emphasis, actions and forward-moving elements.

Brand Color Combination 3

S1	S2	P2	P4

A lighter, open expression with a contemporary feel.

S1 and S2 create a lighter blue foundation, while Clarity Ivory maintains warmth and visual balance. Progress Orange adds a focused accent, bringing energy and emphasis without overpowering the lighter composition.

Usage principle:

Use S1 as the stronger supporting color, with S2 and Clarity Ivory creating openness and hierarchy. Use Progress Orange selectively for emphasis, actions and key moments.

Workforce performance overview

Review key performance indicators across teams and locations.

Track workforce performance, identify operational gaps and bring key insights together in one clear view. Use the data to understand what is working, where attention is needed and what action should follow.

Updated 09 September 2026

Brand Color Combination 4

P3	S5	P2	P4

A grounded, human expression with a softer visual balance.

Grounded Olive establishes the dominant character of the combination, supported by its lighter S5 variation and Clarity Ivory. Progress Orange introduces a focused accent that adds energy and emphasis to the otherwise grounded composition.

Usage principle:

Use Grounded Olive as the dominant color, with S5 and Clarity Ivory creating tonal contrast and visual breathing space. Use Progress Orange selectively for emphasis, actions and key moments.

Workforce performance overview

Review key performance indicators across teams and locations.

Track workforce performance, identify operational gaps and bring key insights together in one clear view. Use the data to understand what is working, where attention is needed and what action should follow.

Updated 09 September 2026

Brand Color Combination 5

P1	S5	P2	P4

A balanced expression that brings structure and warmth together.

Authority Blue provides a strong anchor, while S5 and Clarity Ivory create a softer, more open visual field. Progress Orange adds a controlled point of energy, creating contrast without disrupting the overall balance.

Usage principle:

Use S5 and Clarity Ivory as the dominant background tones, with Authority Blue establishing hierarchy and structure. Use Progress Orange selectively for emphasis, actions and key moments.

Workforce performance overview

Review key performance indicators across teams and locations.

Track workforce performance, identify operational gaps and bring key insights together in one clear view. Use the data to understand what is working, where attention is needed and what action should follow.

Updated 09 September 2026

Brand Color Combination 6

S1	S5	P2	P4

A confident, contemporary expression with strong visual presence.

S1 establishes the dominant color field, while S5 and Clarity Ivory introduce softer contrast and visual balance. Progress Orange provides a focused accent, adding energy and emphasis to the composition.

Usage principle:

Use S1 as the dominant foundation, with S5 and Clarity Ivory providing supporting contrast. Keep Progress Orange limited to key actions, highlights and moments that require attention.

Workforce performance overview

Review key performance indicators across teams and locations.

Track workforce performance, identify operational gaps and bring key insights together in one clear view. Use the data to understand what is working, where attention is needed and what action should follow.

Updated 09 September 2026

Brand Color Combination 7

P1	S3	P2	P4

A refined, neutral expression with strong professional clarity.

Authority Blue provides structure and visual authority, while S3 introduces a neutral layer that softens the composition without changing its character. Clarity Ivory maintains openness, and Progress Orange adds a controlled point of energy and emphasis.

Usage principle:

Use S3 and Clarity Ivory to create the primary visual field, with Authority Blue establishing hierarchy and structure. Keep Progress Orange selective, using it only for emphasis, actions and key moments.

Workforce performance overview

Review key performance indicators across teams and locations.

Track workforce performance, identify operational gaps and bring key insights together in one clear view. Use the data to understand what is working, where attention is needed and what action should follow.

Brand Icons

A functional icon system with a distinctive brand character.

The Optra360 and Zoptro icon system extends the visual language of the identities into functional communication. Icons are designed to be clear, bold and immediately recognisable, while maintaining the geometric character of the brand.

Designed to work across the brand ecosystem

The icon system provides a consistent visual vocabulary for representing actions, information, states and functions across brand communications and digital experiences.

Clear by nature. Distinctive by design.

Icons use simple forms and controlled geometry to communicate quickly, while their visual character connects them back to the identity.

Icons should simplify information, not add visual complexity.

Icon Construction

Built from the same visual language as the identity.

The Optra360 and Zoptro icon system extends the visual language of the identities into functional communication. Icons are designed to be clear, bold and immediately recognisable, while maintaining the geometric character of the brand.

Core construction principles:

BOLD GEOMETRY

Forms are substantial and visually confident, avoiding delicate or overly lightweight treatment.

SHARP TERMINALS

Ends remain defined and angular, reinforcing the precision of the brand identity.

CONTROLLED CURVES

Curved elements are carefully proportioned to balance the sharper geometric forms.

CONSISTENT VISUAL WEIGHT

Icons maintain a unified weight and proportion so they work together as a coherent system.

The icon system follows the same principle as the identity: strong geometry, controlled detail and simplicity.

Icon scale

Scale with context, not attention.

Icons should be sized according to their surrounding content and the role they perform. The icon should remain clearly recognisable without becoming visually dominant or competing with the accompanying message.

Core construction principles:

CONSISTENT VISUAL SCALE

Icons used together should maintain a comparable visual presence.

CONTEXT-LED SIZING

Scale icons according to the size and density of the application.

CLEAR RECOGNITION

Maintain sufficient size for the icon to remain immediately identifiable.

PROPORTIONAL SCALING

Always scale the complete icon proportionally. Never stretch or compress the artwork.

The icon should support the content, not become the content.

Spacing & Placement

List format

Internal spacing and locking

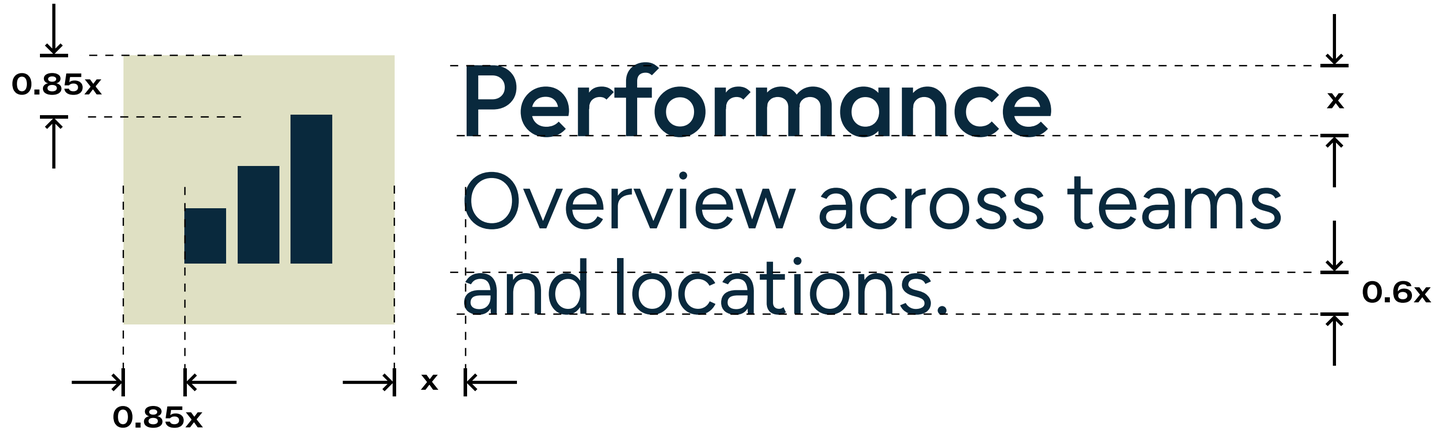
List format

Minimum outer padding

Spacing & Placement

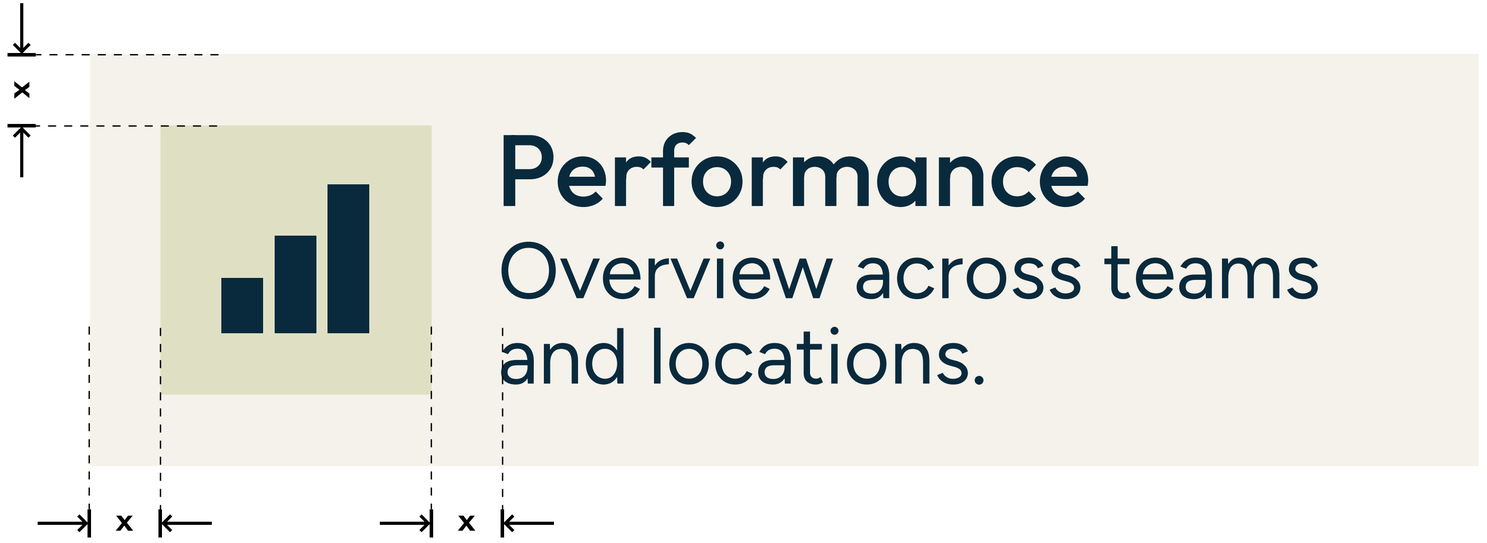
Card format

Internal spacing and locking



Card format

Outer padding



Icon Scale

Small scale

A small icon used alongside a caption / metadata line.

- Refresh Data
- Download Report
- Restricted Access

Use smaller icon sizes for secondary information such as timestamps, file details or status labels.

Medium scale

For headings, titles and key content.

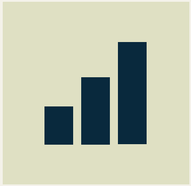
Performance
Overview across teams and locations.

Account Settings
Manage your profile and preferences.

For most applications, providing clear recognition and good visual balance.

Large scale

For feature areas, empty states and visual anchors.



Performance insights
Review key indicators across teams and locations.

View Dashboard

Icon Color Guidelines

Use color with purpose and consistency.

Icons should use the approved brand color palette to reinforce the visual hierarchy of the communication. Color should support recognition and contrast while keeping the overall expression clean and controlled. Keep icon colour consistent within a visual group. Avoid assigning multiple colors to icons unless color has a clear functional or hierarchical purpose.

Light Background + Dark Foreground

Dark Background + Light Foreground

Brand Imagery

Imagery Style

Human realities. Structured environments. Purposeful technology.

Photography should show the real-world context in which people, processes and technology come together. Images should feel credible, composed and purposeful, reflecting the complexity of modern organisations without making that complexity feel chaotic.

PEOPLE AT THE CENTRE

Show people actively working, collaborating, deciding and solving problems. Favour authentic moments over posed corporate interactions.

COMPLEXITY WITH CLARITY

Use environments and situations that communicate scale, structure and real-world complexity through clean compositions.

TECHNOLOGY AS AN ENABLER

Show technology naturally within the environment, supporting the story rather than becoming the subject.

CONFIDENT, NOT CORPORATE

Maintain a professional, serious and contemporary character without generic corporate imagery.

Subject & Composition

Focus the frame on what matters.

Imagery should have a clear primary subject and enough visual space for the subject to be immediately understood. Composition should feel deliberate, calm and structured rather than busy or overly stylised.

CLEAR SUBJECT

Keep the person, team, activity or environment that carries the story as the dominant visual element.

MINIMAL ENVIRONMENT

Use clean, uncluttered surroundings. Supporting objects should provide context without competing for attention.

NATURAL PERSPECTIVE

Prefer front-facing, straight-on, controlled three-quarter or elevated/top-down perspectives.

STABLE FRAMING

Use level horizons and balanced compositions. Avoid tilted, Dutch-angle or artificially dramatic camera positions.

Photography Character

Serious. Human. Credible.

The photographic character should reflect the personality of the brand without becoming overly formal or emotionally exaggerated.

AUTHENTIC

Natural interactions and believable working situations.

PROFESSIONAL

Confident, mature and appropriate for enterprise decision-makers.

HUMAN

People should feel engaged and purposeful, not posed or performative.

CONTEMPORARY

Modern workplaces, technology and operational environments without futuristic clichés.

Real people, real environments and believable moments.
This supports the strategic personality of Optra360: Credible · Practical · Human · Progressive · Accountable.

Color & Image Treatment

Keep photography natural. Let the brand system do the branding.

Photography should retain realistic skin tones, materials and environments. Avoid excessive color grading or treatments that make imagery feel artificial.

NATURAL COLOR

Maintain realistic and balanced photographic color.

CONTROLLED CONTRAST

Use clear tonal separation without excessive contrast, HDR effects or dramatic shadows.

SUBTLE BRAND CONNECTION

Use approved brand tones naturally, without forcing color into the photography.

CLEAN BACKGROUNDS

Prefer simple, neutral environments that let the graphic system provide the color expression.

Avoid heavy filters, excessive blur, glow, color overlays, gradients or futuristic visual effects. Photography should feel real. The brand expression should come from the system around it.

Imagery Do's & Don'ts

Use imagery that adds clarity, not visual noise.

DO'S

Show authentic working moments

Keep the main subject immediately clear

Use clean, structured environments

Use natural, stable camera perspectives

Show technology as an enabler

Maintain realistic color and lighting

Use serious, confident expressions

Keep background text secondary / non-dominant.

Use realistic workplaces and operations

Leave useful negative space

DON'TS

Use posed corporate interactions

Use cluttered compositions

Fill the frame with unnecessary objects

Use tilted or dramatic stylised angles

Make screens or technology the hero

Use heavy filters or artificial grading

Use exaggerated smiles or staged reactions

Use generic futuristic environments

Crop subjects awkwardly or excessively

AI-generated Imagery Guidelines

The principle

Create with consistency. Adapt with purpose.

AI-generated imagery should follow a consistent visual framework. Keep the brand principles fixed while adapting the subject, environment and situation to the communication.

FIXED BRAND PRINCIPLES

Human · Structured · Credible · Controlled · Purposeful
These remain consistent across every AI-generated image.

VARIABLE CONTENT

Subject · People · Action · Environment · Context
These change according to the communication and business situation.

QUALITY CONTROLS

Realistic · Clean · Natural · Text-free · Logo-free
Every generated image should be reviewed against these controls before use.

The Prompt

Create a realistic, professional photographic image in [FORMAT / RATIO] showing [SUBJECT / PEOPLE] engaged in [ACTIVITY / SITUATION] within [ENVIRONMENT / CONTEXT].

The image should feel human, credible, structured, purposeful and contemporary, with a clear primary subject, clean composition and useful negative space. Show authentic working interactions and believable expressions. Use a clean, realistic environment, natural lighting, realistic color and restrained contrast.

Use a stable, natural camera perspective, front-facing, straight-on or controlled three-quarter/elevated view. Keep horizons level. Avoid tilted, Dutch or dramatic angles. Show technology naturally as an enabler, not the subject. Keep screens and interfaces abstract or out of focus, with no readable text, logos, brand marks or unintended messaging.

Avoid clutter, generic corporate stock imagery, futuristic technology aesthetics, excessive effects, artificial color grading, exaggerated expressions, unrealistic anatomy and unnecessary visual drama.

Clear subject. Clean environment. Controlled perspective. Authentic moment.

Supporting Graphic Illustrations & Patterns

Illustration Style

Complexity, expressed through structure.

Support graphic illustrations use a structured system of dots, connections and geometric forms to represent complex ideas, relationships and systems in a simple, distinctive way. The visual language should feel precise, intelligent and contemporary, adding depth and character without competing with the primary communication.

CORE CHARACTERISTICS

Structured · Geometric · Connected · Minimal · Precise · Purposeful

THE DOT SYSTEM

The dot is the fundamental visual unit. Through changes in scale, density, position and connection, it can represent people, processes, systems, data, networks and transformation.

DOT — A single element / point of focus
FIELD — Multiple elements forming structure, scale or form
NETWORK — Connected elements representing relationships and systems

Construction & Behaviour

Build from simple elements.

Support illustrations are constructed using:

Dots — primary visual unit
Lines — relationships and movement
Geometric forms — structure and framing
Negative space — clarity and separation
Density — scale, emphasis and complexity

Dots can vary through scale, density, position, connection, formation and hierarchy. Variation should communicate meaning, not create decoration.

Visual Metaphors

Support illustrations are constructed using:

Complexity → Dense / fragmented field
Clarity → Ordered / simplified structure
Connection → Linked nodes
Process → Directional progression
Transformation → Connected formation
Governance → Structured with hierarchy
Execution → System moving toward an outcome

Color & Composition

Adapt the visual. Maintain the system.

COLOR

Use the approved brand palette selectively, adapting color to the background, composition and visual hierarchy. Light and dark backgrounds may use different combinations.

COMPOSITION

Use intentional cropping, scale, density and negative space to integrate the illustration with the layout.

The visual adapts to the context. The language stays consistent.

PEOPLE + PROCESS

UNIFIED OPERATIONS

Connected Systems

Co-branding & Partner Logos

Logo Placement & Hierarchy

Create a clear relationship.

PRIMARY POSITION

Optra360 logo should lead the communication and establish brand ownership.

PARTNER POSITION

Partner logos should appear in a secondary, clearly defined position.

SEPARATION

Maintain sufficient space between logos. Use a divider only when it improves clarity.

SCALE

Partner logos should be optically balanced with the Optra360 logo, without appearing larger or more prominent.

Partner Logo Sizing

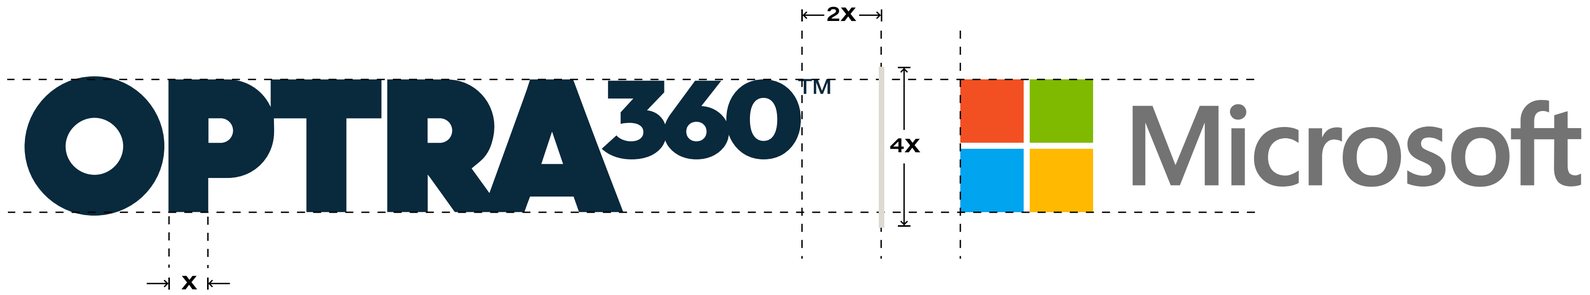
DIMENSION

Partner logo must remain within the Optra360 logo height.
If the partner icon exceeds the guide rails, scale the complete logo proportionally.

SPACING

Maintain a minimum 2X horizontal gap between logos. When used, the divider height is 4X.

Partner Logo Sizing



OPTRA360™ | Microsoft

Partner Logo Sizing

DIMENSION

Partner logo must remain within the Zoptro logo height.
If the partner icon exceeds the guide rails, scale the complete logo proportionally.

Presentation & Document Styling

Document Styling - A4

Clear. Structured. Consistent.

A4 documents should follow a consistent typographic and spacing system that makes information easy to scan, navigate and understand.

LAYOUT

- Maintain consistent 20 mm margins
- Use a structured grid and alignment system
- Keep content within defined margins
- Use whitespace to establish hierarchy
- Maintain consistent headers, footers and page numbering

SPACING

- Title → Subheading: 12–20 mm
- Subheading → Body: 12–16 mm
- Between content blocks: 16–24 mm
- Between major sections: 24–30 mm

TYPE SCALE

Use Outfit for titles and headings, and Figtree for body copy, emphasis and supporting information.

Structure information before styling it.

UNDERSTAND

People, performance and organisational progress.

The 2025–26 year focused on strengthening workforce capability, improving employee experience and creating greater consistency across people processes.

Key Highlights

- 1,248 total employees
- 186 new hires
- 11.2% voluntary attrition
- 94 internal promotions
- 18,640 training hours

The year focused on strengthening workforce capability, improving employee experience and creating greater consistency across people processes. The key highlights reflect steady progress in building a more capable, engaged and connected organisation.

Performance Overview

Metric	2024–25	2025–26
Total Employees	1,162	1,248
New Hires	154	186
Voluntary Attrition	13.4%	11.2%
Internal Promotions	76	94
Training Hours	14,820	18,640

Workforce Growth: Employee strength increased from 1,162 to 1,248, supported by 186 new hires during the year.

Talent Movement: 94 employees progressed through internal promotions, reflecting continued opportunities for career growth.

Capability Building: 18,640 training hours were delivered to strengthen workforce skills and organisational capability.

UNDERSTAND

People, performance and organisational progress.

The 2025–26 year focused on strengthening workforce capability, improving employee experience and creating greater consistency across people processes.

Key Highlights

Talent Movement: 94 employees progressed through internal promotions, reflecting continued opportunities for career growth.

Capability Building: 18,640 training hours were delivered to strengthen workforce skills and organisational capability.

Presentation Slide Styling

Clear. Structured. Consistent.

Presentations should follow a consistent visual system that makes information easy to scan, understand and navigate.

LAYOUT

- Maintain consistent slide margins & alignment
- Use a 3 × 3 grid, with each content block aligned to the left and top grid lines
- Use a structured grid for content placement
- Keep one primary idea per slide
- Use whitespace to establish hierarchy
- Maintain consistent positioning of recurring elements

One slide. One clear idea.

SPACING

- Title → Content: min 30 px
- Between content blocks: 100 px
- Between related elements: min 20 px
- Maintain consistent internal padding within cards and containers

TYPE SCALE

Use Outfit for titles and headings, and Figtree for body copy, emphasis and supporting information.

Annual HR Review 2025–26

The 2025–26 year focused on strengthening workforce capability, improving employee experience and creating greater consistency across people processes.

Key Highlights

The year focused on strengthening workforce capability, improving employee experience and creating greater consistency across people processes. The key highlights reflect steady progress in building a more capable, engaged and connected organisation.

Accessibility Considerations

Clear for everyone.

Brand expression should remain legible, distinguishable and usable across different viewing conditions and communication formats.

Color & Contrast

WCAG 2.2 — Level AA

- 4.5:1 minimum contrast for normal text
- 3:1 minimum for large text
- 3:1 minimum for essential UI elements and graphics
- Never rely on color alone to communicate meaning

Structure information before styling it.

Approved Combinations

Maintain a minimum 4.5:1 contrast for normal text and 3:1 for large text and meaningful icons or graphical elements.

Building powerful and memorable brands for startups through strategy, identity, packaging, website design and more.
